**SyberEduTA application:-**

Sybernautix announces the release of its new product "SyberEduTA", a solution for Time and Attendance system.SyberEduTA helps in recording the attendance of the students in school/college, thus avoiding the use of registers for taking the attendance.

SyberEduTA automatically records the time of in/out of the student as he/she punches using the finger. As the student punches on to the scanner fixed to a device, the scanner detects the finger print and verifies it with the enrolled fingers and records the time of punch. Thus the attendance of the student is marked. Incase, if the student is absent, then a sms is sent to his/her parent/guardian informing about their absence with the help of a separate SMS Module provided along with the device.

SyberEduTA is the integration of hardware and software, hardware for identification and software for storing the details of the students and generating various reports.

This product is used by the management of the schools, colleges and other educational institutions.

**Features:-**

- Significantly reduce time required to manually process of recording the daily attendance for students.

- Provided with a database to store the details of the individual student along with his/her finger print templates.

- One can obtain status about the attendance of the students with the help of various reports like Daily Reports, Monthly Reports etc.

- Works in network, standalone modes.

- Quickly generate reports that provide better management and information on student time tracking.

- A front end application to enter the details of the students during enrollment, and a back end database to store all the details including the fingerprint templates.

- Integrated SMS module to send sms to the mobile of the student's parent/guardian incase of their absence to school/college.
