

#### **SyberPark Application:-**

Sybernautix is happy to announce the release of its new product "SyberPark" in security and identity protection in Parking Management. It helps the security staff by providing latest and user friendly solution. This is mainly used in places like train stations, shopping malls, commercial buildings, airports, amusement parks etc.

This application helps in getting the information regarding the time of parking of a particular vehicle. In this application all the vehicles that use the parking area are enrolled along with the driver/owner's image. The images of the vehicle number plates are stored in the database in a PC. Cameras are fixed at the entrance and the exit of the parking area. The images of the vehicles are captured by these cameras and sent to the PC. The application identifies the captured images and verifies with those that are already enrolled in the database and gives out the time of entrance and exit of the vehicle along with the driver's image.

#### **Features:-**

- Application consists of a stand alone PC.
- Cameras to capture the number plates of the incoming and outgoing vehicles are fixed at the entrance and exit gates of the parking area.
- Consists of a large database to store the vehicle details along with images of the number plate and driver/owner.
- A front end application that processes the captured images verifies with the list available in the database and reports the entrance and exit times.

This application can be used in public areas such as Shopping malls, stadiums, public meeting places, airports, amusement parks, train stations etc.
